

Seminar Presentation on

Focus your Sequencing Efforts with Agilent's SureSelect Target Enrichment Process

Date & Location	SPEAKER
Wednesday, Feb 9th, 2011 11:00 AM in M&V 702	Scott D. Leppanen, Ph.D. <i>Field Applications Scientist</i> <i>Agilent Technologies</i>

Leveraging our ability to make high quality, long oligos, Agilent has created a genomic solution to enrich for regions of interest prior to next generation sequencing and analysis. This allows for greater depth of coverage for more samples, while saving sequencing dollars and time. This talk will review Agilent's complete solution, and highlight our products by providing sequencing data.

Hosted by

Dept of Molecular Physiology & Pharmacology
